PROFESSIONAL SUMMARY

Software engineer with 4+ years across web, mobile, and backend — strongest in web and mobile. Architects production React / React Native systems and owns the infrastructure that ships them: CI/CD pipelines, release automation, and offline-first data layers. Drives technical decisions on tooling, infrastructure, and third-party services across engineering.

CORE STACK

Mobile: React Native, Expo, EAS Build, Fastlane, Detox, WatermelonDB

Web: React, Next.js, JavaScript, TypeScript, Vite, Tailwind CSS, MERN stack

State: Redux (redux-persist), Zustand, TanStack Query

Data / Charts: Chart.js, react-table, GraphQL (Codegen), REST APIs, offline-first sync

Infra & CI/CD: Jenkins, GitHub Actions, DigitalOcean, self-hosted Mac mini build server, Fastlane

Auth: Apple, Google, Facebook, OTP flows

Observability: Sentry, Amplitude, AppsFlyer

Domains: Fintech, GovTech (tax/revenue), HR SaaS, EdTech, food delivery

WORK EXPERIENCE

Grade Up — Mobile Engineer (Contract, Remote)

Dec 2025 – Jun 2026

- Architected and led development of a cross-platform EdTech application (iOS, Android, Web) on React Native + Expo, owning full technical direction — architecture, tooling, infrastructure, and third-party service decisions end-to-end
- Designed a modular MVVM system spanning **18+ feature modules**, enabling parallel feature development across the team
- Overhauled the entire CI/CD pipeline: migrated off Bitrise to a self-managed stack of Jenkins + DigitalOcean runners with a stationed Mac mini for iOS/Android binary builds and Fastlane for App Store/Play Store deployments — **eliminating \$200+/month in vendor cost** while delivering faster builds
- Engineered an offline-first data layer with WatermelonDB + GraphQL sync reconciliation, ensuring uninterrupted use in low-connectivity regions
- Established the engineering quality bar via Detox E2E, Jest, GraphQL Codegen, and enforced lint/commit pipelines
- Integrated production observability (Sentry, Amplitude, AppsFlyer) powering crash triage and product analytics across the platform
- Mentored an intern engineer — onboarded them onto the codebase, reviewed their work, and brought them up to the team's engineering standards

Taxtech — Frontend Engineer

Jul 2024 – Present

- TPay** — owned and shipped a production fintech platform serving **10,000+ users** — full payroll, payslip, and pension remittance flows, seven statutory tax types (PAYE, VAT, WHT, CIT, NHF, ECSL, TET), wallet, invoicing, payment links, and third-party API integrations
- TMonee** — consumer fintech platform extending TPay's core with bills payment (airtime, electricity, cable, internet, gaming), government levy collection, and loan management — delivered as a Progressive Web App
- TMonee Admin** — back-office operations dashboard covering user and company management, analytics, audit trails, KYC compliance, and configurable payment gateway and transfer-provider settings
- 247** — loan underwriting admin enabling internal teams to review, approve, and track loan requests from TPay users, with loan metrics and analysis dashboards

- **THr** — HR SaaS platform covering end-to-end workforce operations: employee records and onboarding, leave and attendance management, payroll-linked HR workflows, and internal team administration
- **Oredo Revenue** — government tax-revenue management system for Oredo LGA — agent management, tax assessments, collections by revenue head, defaulter tracking, and field enumeration workflows; also delivered OredoPay (public payment portal) and two internal enumeration admin platforms (TServe, TPSL)
- **TBook + Enumeration + Biometrics** — React Native mobile fintech app (payroll, wallet, loans, investments); a field data-collection app for on-ground tax enumeration; and a biometrics system for identity verification

Foodash — React Native Developer

Mar 2022 – Jun 2023

- Built and launched a full food delivery application solo while still in university — owned the entire product from architecture and implementation through to App Store and Play Store deployment
- Integrated Paystack payment gateway end-to-end, including webhook handling to reconcile payment state server-side and materially reduce failed or stuck transaction errors
- Demonstrated the ability to scope, build, and ship a production-grade mobile product independently under real-world constraints

Side Hustle — Frontend Developer (Intern)

Apr 2021 – Feb 2022

- Contributed production features to a MERN-stack application as part of a small, fast-moving team
- Built reusable UI components and integrated backend APIs

PROJECTS

Datasek — Frontend Engineer

Jun 2022 – Jun 2023

- Built an e-learning platform on React with Laravel backend integration, supporting assignments, lectures, and assessments

VOLUNTEER WORK

Chess in Slums Africa — Frontend Developer (Volunteer)

May 2023 – Present

- Built and maintained the organization's public-facing site and internal admin dashboard supporting fundraising and program operations
- Designed a donation tracking system, CMS modules, and volunteer management tooling, replacing manual workflows with self-serve admin capabilities
- Modernized content workflows, materially improving site maintainability and contributor velocity

EDUCATION

B.Eng. Materials and Metallurgical Engineering

Federal University of Technology, Akure
